

# MISKA ALEXIA

Bellingham, WA & Anchorage, AK | (907) 717-5360 | [alexia.miska@gmail.com](mailto:alexia.miska@gmail.com)

## EDUCATION

### Western Washington University, Bellingham, WA

Computer Science Major | Creative Writing Minor | 3.52 GPA

- Relevant coursework: Physics 161-163, Linear Algebra, Multivariable Calculus, Data Structures, Algorithms, and electives from the Math/Computer Science department.

## EXPERIENCE

### Senior Project Primary Client Liaison, Susitronix Partnership

- Managed a small team for one school year using Agile methodologies, with weekly stand-ups, sprint planning, and retrospectives with the client and faculty advisor.
- Served as project liaison, communicating expectations with the client, managing my team's workload, and working with the client to set goals and communicate our progress
- Recognized by the client for my excellent communication

### See Stories, Anchorage, AK, International Understanding Internship, 2020

- Worked with an Alaskan non-profit dedicated to building inclusive communities with film and story

### See Stories, Anchorage, AK, Documentary Filmmaking Internship, 2025

- Worked with See Stories with the specific goal of creating material for Alaska Studies Curriculum

## PROJECTS

### Bevy Game Project, Rust, 2025-Ongoing

- Set up physics for my Bevy projects using the Avian physics engine, including collider mapping
- Wrote a system to fully deconstruct and construct a level, including resource loading, scene management, ECS, and UI interaction.
- This gave me familiarity with the inner workings of a game engine without the safety of a graphical environment
- Built off my knowledge of Unity and Unreal 4 and 5

### Senior Project Radar Data Forwarding System, Rust, Ultra96v2 MPSOC Arm64 Platform

- Senior project team in partnership with Susitronix, building a software suite for their wave sensing radar system
- Wrote a server and archiver, transmitting and archiving 2GB/s over a local network without slowdowns
- Implemented networking with ZeroMQ (ZMQ), data archival with HDF5, and custom management of commands from a separate graphical radar visualization client built by my team

### Object-Oriented Monolithic Kernel, C++, RiscV64 Virtual Machine

- Wrote a full memory management system including paging and multiple allocation strategies.
- Implemented multithreading, filesystem management, and Device Drivers.
- Involved significant use of GDB for debugging
- Solo project for a 400-level Operating Systems class, based on Dr. Phil Nelson's proprietary ToyOS; code available to view on request.

### Linux Systems, Gentoo Distribution, 2020-Ongoing

- Gentoo, a "do it yourself" Linux distribution requiring deep knowledge of the Linux OS and the system it is installed on.
- Worked with SystemD and OpenRC services, X11 and Wayland, boot process, UEFI Secure Boot, Trusted Platform Module, and LUKS, plus KVM, QEMU, VirtIO, and IOMMU
- Scripts to automate manual POSIX tasks

## SKILLS

C, C++, C#, Rust, Java, Python, Bash, Linux (Gentoo), SystemD, OpenRC, X11, Wayland, Boot process, UEFI Secure Boot, Trusted Platform Module (TPM), LUKS, KVM, QEMU, VirtIO, IOMMU, Docker, Podman, Memory management, Paging, Allocation strategies, Multithreading, Concurrency, Profiling, Optimization, Data-oriented design, Git, GDB, Valgrind, SQL, CI/CD testing, Vim, POSIX CLI, Azure DevOps (ADO), Jira, Unreal Engine, Unity, Godot, Bevy, Blender, Avian physics engine, ZeroMQ (ZMQ), HDF5, Technical writing, Documentation, Client and manager communication
